

# PER BERGMAN

Generative Architect — AI • Cloud • Blockchain • Distributed Systems  
Senior Manager, Ernst & Young

Santa Fe, NM, USA • [nondualist@gmail.com](mailto:nondualist@gmail.com) • [linkedin.com/in/perbergman](https://www.linkedin.com/in/perbergman) • [github.com/perbergman](https://github.com/perbergman)

SUMMARY

Generative Architect with 30+ years designing and delivering complex distributed systems across AI, blockchain, and cloud. Known for extremely fast generative prototyping (**80+ apps in 2025**), deep architectural clarity, and the ability to synthesize multiple domains into elegant, working systems. Creator with **100+ GitHub repositories** built through a long-term generative engineering practice — spanning AI workflows, distributed systems, blockchain tooling, and rapid 0→1 prototypes. Operates best in high-ambiguity, high-complexity environments. Expert in AI-assisted development using Claude Code, Cursor, Windsurf, Copilot, and Augment. Designs architectures that integrate ledger systems, cloud-native services, smart contracts, event-driven patterns, and large-scale data flows. A rare combination of deep systems knowledge, creative intelligence, and rapid 0→1 execution.

VALUE PROPOSITION

I specialize in turning **high-ambiguity, high-stakes technical programs** into **coherent, scalable architectures** that large organizations can actually run. My strength is seeing structure where others see noise — rapidly stabilizing complexity, defining clear patterns, and producing systems that hold together in production at real-world scale.

ARCHITECTURAL THROUGHLINE

Across three decades, my work has followed a single thread:  
**turning complex, ambiguous domains into coherent systems.**

From early telecom and object databases in Sweden → enterprise integration and cloud architectures → decentralized ledgers, identity, and ZKP → to today's agentic AI and rapid generative prototyping.

Across these eras, one pattern remains constant:  
**seeing structure in noise, moving from insight to architecture quickly, and building systems that hold together under real-world scale.**

This is the core of my practice —  
a blend of engineering depth, pattern recognition, and generative speed that lets new systems emerge fully formed.

CORE CAPABILITIES

- Generative AI-assisted prototyping
- 0→1 system creation
- Distributed architecture
- Blockchain & smart contract design
- Cloud-native patterns (Azure, AWS)
- Workflow & data pipelines
- High-scale systems
- Technical strategy & executive advisory
- Emerging tech R&D
- FinTech, carbon markets, traceability
- Identity & cryptographic workflows
- AI developer workflows (LLM-first development)

EXPERIENCE

**Ernst & Young — Senior Manager, FinTech/Blockchain Tech Lead & Solutions Architect**  
**2022–Present**

**Flagship Project — Public Funds Management: Global Funds Disbursement Tracking (2023–Present)**

Solution Architect for global public funds disbursement tracking platform.

- Designed a **global multi-party transparency and traceability system** used across national institutions and governmental organizations.
- Architected the core blockchain ledger on **Hyperledger Besu**, with custom Solidity contracts and secure state evolution.
- Built full Azure cloud architecture: Azure Functions, Service Bus, Storage, Postgres, DevOps, identity and privileged access governance.
- Integrated **AI and Agentic layers** using Azure AI Foundry, OpenAI, and LLM workflows.
- Designed identity, access controls, regulatory reporting structures, and event lifecycle models.
- Provided executive architecture guidance for program governance, technical roadmap, and future-state design.

**Other EY Blockchain & AI Highlights**

- Canton Network Deployment:**  
Deployed and configured **Canton validator nodes** (DevNet → TestNet → MainNet) for real transaction flows, including governance setup, networking, operational readiness, and secure environment configuration.
- Architected carbon offset systems, FinTech transaction flows, and enterprise identity solutions.
- Built rapid AI-powered prototypes using Claude Code, Cursor, Windsurf, Augment, and Copilot.

**Technologies:** Azure, Azure AI, Hyperledger Besu, Solidity, DAML, Canton, Ethereum tooling, Postgres, ACA, Azure Functions, Service Bus, DevOps.

**Maxana — Vice President of Innovation**  
**2022**

- Designed multi-domain FinTech, payments, and workflow systems.
- Built marketplaces, payment integrations, and enterprise alerting prototypes.
- Led demos, pre-sales, and architecture R&D.

**Technologies:** AWS, Python, Java, Go, Kubernetes, Datadog, Prometheus, Camunda Workflow, Stripe APIs.

**Ernst & Young (via Zilker acquisition) — Senior Architect**  
**2020–2022**

- Architected real-time mobile delivery system with distributed event processing.
- Led blockchain royalty tracking, DAML carbon-credit PoC for repo loans, and vendor assessments.
- Delivered mobile, cloud, and distributed workflows across industries.

**Technologies:** Microsoft Quorum, Hyperledger Besu, DAML, Ethereum, Bitcoin, AWS, Android/Kotlin.

**Zilker (acquired by EY) — Senior Architect, Blockchain & Integration**  
**2020**

- Designed DAML-based smart contract workflows.
- Hyperledger Fabric blockchain project for the healthcare industry.

**Technologies:** DAML, AWS, Hyperledger Fabric, Kafka, HashiCorp Vault, Terraform, Ansible.

**XPANSIV — VP Technology, Innovation Group / Senior Software Architect**  
**2018–2020**

Architectural lead for environmental commodity and carbon market platforms.

- Designed next-generation integrity, provenance, and lifecycle models for global carbon markets.
- Prototyped distributed ledger workflows and high-integrity commodity-data systems.
- Designed decentralized identity prototypes using **Hyperledger Aries**, verifiable credentials, and **DIDs**.

**Technologies:** AWS, Node.js, Go, Java, Scala, React, Kafka, Postgres, ledger models, Aries/DID.

**Oculus360 — Senior Software Architect**  
**2015–2018**

- Architected a high-volume behavioral analytics and ML-integrated search platform.
- Designed real-time ingestion pipelines for high-velocity behavioral signals.
- Built low-latency query infrastructure and ML inference integration.

**Technologies:** Java, Python, AWS, Spark, Kafka, Elasticsearch, Redis.

**IBM — Consultant (Architecture)**  
**2013–2015**

- Enterprise architecture for global cloud and integration programs.
- Designed early cloud-native reference architectures.
- Modernized enterprise BPM/SOA platforms.

**Technologies:** WebSphere BPM, MQ, Java, DB2, Linux, AWS.

**EMC — Consultant**  
**2012–2013**

- Systems integration and enterprise consulting across storage and cloud ecosystems.

**Technologies:** EMC storage, VMware, Linux, Java, Spring Boot.

**Amazon — Software Development Engineer**  
**2007–2008**

- Built and maintained distributed systems for global-scale availability.
- Implemented monitoring, automation, and resilience patterns.

**Technologies:** Java, Linux, AWS internal toolchain, distributed coordination systems.

**Ascendant — Consultant**  
**2008–2012, 2006–2007**

- Designed and delivered enterprise systems across the **US, Turkey, and the Netherlands**.
- Led architecture, integration, and cloud-transition initiatives across distributed teams.

**Technologies:** Java, Spring, SQL, early AWS, integration stacks.

**Versant — Consultant**  
**2000–2006**

- Developed distributed object database workflows and storage engines.
- Built transaction coordination, indexing, and object persistence models.

**Technologies:** C++, Java, ODBMS internals, distributed commit models.

**Early Career — Sweden (Telecom & Distributed Systems)**  
**1991–2000**

Software Engineer and Architect roles across Swedish telecom and early internet companies. Work included distributed systems, early object-oriented architectures, and large-scale enterprise platforms across telecom networks and early internet infrastructure. Fluent in Swedish; dual US/EU (Sweden) citizenship.

SIGNATURE PROJECTS

**Zero-Knowledge Proof System (EY)**

Designed a full-stack ZKP-based private transaction workflow.

- Implemented Circom/Groth16 circuits (BN254).
- Built proof generation, on-chain verification, and encrypted event flows.
- Designed UTXO-style private state using Pedersen commitments.

**AI-Accelerated Development Pipeline (EY)**

LLM-first SDLC using Claude Code, Cursor, Windsurf, Augment, and Copilot for GitHub.

**Decentralized Identity & Verifiable Credential Prototype (XPANSIV)**

Designed a verifiable credential workflow for oil & gas ownership lineage.

- Implemented multiple **Hyperledger Aries agents** representing real stakeholders.
- Used **VCs** and **DIDs** to prove relationships (e.g., well ownership → production → operator).
- Integrated identity proofs with commodity-data provenance models.

**Global Carbon Market Traceability Architecture (XPANSIV)**

Ledger-backed commodity lifecycle tracking and regulatory-grade provenance → exchange.

**High-Volume Behavioral Analytics Pipeline (Oculus360)**

Real-time streaming and ML inference architecture.

TECHNOLOGY STACK

**AI Tools:** Claude Code, Cursor, Windsurf, Augment, Copilot, Azure AI Foundry, Huggingface, ollama, LM Studio, Jupyter, SageMaker

**Cloud:** Azure Functions, Azure Container Apps, Service Bus, Postgres, Key Vault, AWS (EC2, ECS, Lambda, RDS, SQS, CloudFormation), Kubernetes (AKS, EKS, GKE)

**Blockchain:** Hyperledger Besu, Solidity, DAML, Canton, Fabric, Aries (DIDs/VCs), ZKP (circuits + verification), Ethereum tooling, EVM internals

**Languages:** Go, TypeScript, Python, Rust, Java, Scala, Erlang, JavaScript

**Data & Architecture:** CQRS, event systems, Postgres/JSONB, Redis, Elasticsearch, graph models (Tinkerpop/Neptune), MongoDB, Hadoop

**DevOps:** GitHub Actions, Azure Pipelines, Terraform, Ansible, Jenkins, monorepos, CI/CD, observability

SELECTED TALKS & WRITINGS

- RAGTime: Neo4j + NVIDIA GPUs on the Cloud** — Medium  
<https://medium.com/@bergman/ragtime-building-a-rag-with-neo4j-and-nvidia-gpus-on-the-cloud-31e11aa03000>
- Zero-Knowledge Proofs in Practice** — internal presentation and architecture walkthrough

CERTIFICATIONS

- DAML Fundamentals, Programming, Architecture** — Digital Asset
- AWS Certified Solutions Architect – Associate**
- Architecting with Google Kubernetes Engine (GKE)** — Google Cloud

LECTURES & PRESENTATIONS

- Agentic AI Architectures** — internal workshops and client advisory
- Digital Twins in Telecom** — technical lecture and industry overview
- Domain-driven Design (DDD)** — internal workshop

EDUCATION

**M.Sc. Computer Science — Sweden**
